DETAILED ACTION

1. Applicants' response to the office action (Paper No. 12) filed on October 17, 2002 has been entered and considered.
2. The Drawings (Paper No. 13) filed on October 17, 2002 has been entered.

Response to Arguments

3. Applicants' response and arguments (Paper No. 12) has been fully considered and found persuasive.
4. The objection made in the previous office action for drawings is withdrawn herein in view of the applicants' amendment (Paper No.12).
5. Applicants' arguments and amendment (Paper No. 12) with respect to the rejection under 35 U.S.C. 112, second paragraph, has been considered and the rejection is with drawn herein in view of applicants' arguments and amendment.
6. Applicant's arguments (Paper No.12) with respect to the rejection under 35 U.S.C. 102(b) for claims 36-41, and 68 has been considered but is moot in view of the new ground(s) of rejection.

New grounds of rejection

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 36-41, and 68 are rejected under 35 U.S.C. 102(e) as being anticipated by Furcht et al. (USPN. 6,054, 277).

Furcht et al. teach a device or apparatus or detecting nucleic acids in a sample comprising (a) a binding space (silicon substrate or collection pads) for immobilizing the nucleic acids and separating impurities (see column 4, lines 15-35, column 8, lines 30-50); (b) an amplification space (thermocycling and amplification chamber) for amplifying comprising at least part of the binding space (see column 4, lines 15-67, and column 6, lines 51-61, column 8, lines 30-50); and a detection space for detecting the nucleic acids (see column 4, lines 22- 35). Furcht et al. also disclose that the apparatus further comprises (i) reagents for purification and amplification and detection of the nucleic acid (see column 8, lines 30-67, column 9, lines 1-16); (ii) capillary space connecting amplification space, binding and detection space (see column 4, lines 51-57, column 6, lines 33-61); (iii) capillary reaction vessel surrounded by heatable element comprises epoxy-like material (metal layer) deposited on to silicon wafer (see column 10, lines 28-47, column 6, lines 33-46); and (iv) capillary space comprises silicon (glass) wafers (see column 10, lines 28-33). Thus, the disclosure of Frucht et al. meets the limitations in the instant claims.

Conclusion

No claims are allowable.
